Bokeh at a Glance

Flexible

Bokeh makes it simple to create common plots, but also can handle custom or specialized use-cases.

Productive

Work in Python close to all the PyData tools you are already familiar with.

Interactive

Tools and widgets let you and your audience probe “what if” scenarios or drill-down into the details of your data.

Powerful

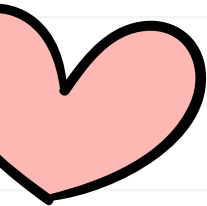

You can always add custom JavaScript to support advanced or specialized cases.

Shareable

Plots, dashboards, and apps can be published in web pages or Jupyter notebooks.

Open Source

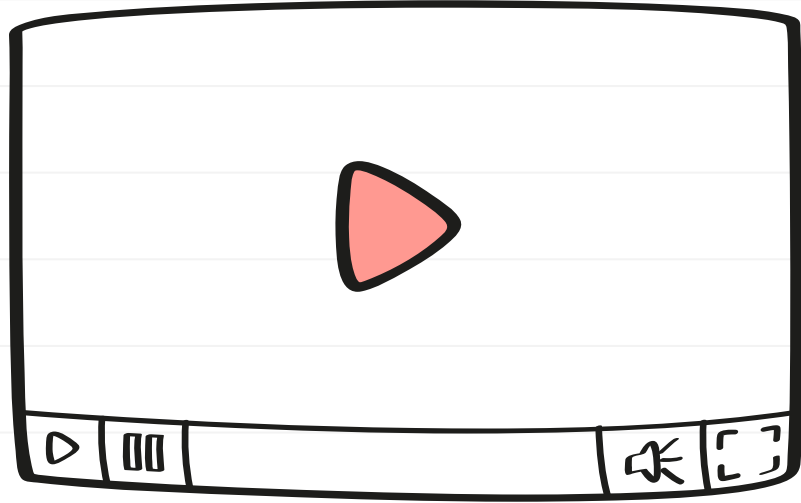

Everything, including the Bokeh server, is BSD licensed and available on [GitHub](#).

MediaWiki

MediaWiki is a free and open-source wiki software package written in PHP. It serves as the platform for Wikipedia and the other Wikimedia projects, used by hundreds of millions of people each month. MediaWiki is localised in over 350 languages and its reliability and robust feature set have earned it a large and vibrant community of third-party users and developers.

MediaWiki is:

- feature-rich and extensible, both on-wiki and with hundreds of extensions;
- scalable and suitable for both small and large sites;
- simple to install, working on most hardware/software combinations; and
- available in your language.

For system requirements, installation, and upgrade details, see the files [RELEASE-NOTES](#), [INSTALL](#), and [UPGRADE](#).

- Interested in helping out? ** https://www.mediawiki.org/wiki/Special:MyLanguage/How_to_contribute

MediaWiki is the result of global collaboration and cooperation. The CREDITS file lists technical contributors to the project. The COPYING file explains MediaWiki's copyright and license (GNU General Public License, version 2 or later). Many thanks to the Wikimedia community for testing and suggestions.
